Non-otologic Dizziness

Timothy C. Hain, MD Clinical Professor Neurology, Otolaryngology, Physical Therapy Northwestern University, Chicago t-hain@northwestern.edu

Dizziness is an imprecise term

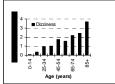

- Vertigo (sensation of motion)
- Lightheaded
- Ataxia
- Confusion

Because "Dizziness" is an imprecise term, a major role of the clinician is to sort patients

Dizziness is VERY Common

- Dizziness is the chief complaint in 2.5% of all primary care visits.
- 30% lifetime prevalence of dizziness requiring medical attention
- Older people have more dizzy problems

Estimated percentage of ambulatory care patients in whom dizziness was a primary complaint (Sloane, et. al., 1989).

Diagnostic Categories

Category

- Otological
- Neurological
- Medical
- Psychological
- Undiagnosed
- Meniere's disease
- Migraine

Example

- Low BP
- Anxiety
- Post-traumatic vertigo

Question 1

- Which category is associated with the most dizziness ?
 - 1. Inner ear disorders
 - 2. CNS problems (e.g. Stroke)
 - 3. Blood pressure
 - 4. Psychological problems
 - 5. Undiagnosed

Answer 1

- It depends on your referral base
 - 1. Inner ear disorders (about 50% of ENT, 30% in general)
 - 2. CNS (about 25% of neurology, 5% everyone else)
 - 3. Blood pressure (30% of family practice, 5% everyone else)
 - 4. Psychological problems (15% to 50%)
 - 5. Undiagnosed (up to 50%)

Diagnostic Categories

- Neurological (i.e. posterior fossa)
- Medical
- Psychological (anxiety, malingering)
- Undiagnosed

Diagnostic Categories – nonotologic dizziness

- 1. Neurological (i.e. posterior fossa)
- Medical (i.e. low blood pressure)
 Psychological (anxiety,
- 3. Psychological (anxiety, malingering)

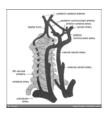

4. Undiagnosed

Causes of neurological dizziness 15-30% subspecialty, 5% ER

- 35% Stroke and TIA (% varies with practice)
- 16% Migraine (% varies with practice)
- Various Ataxias
- Seizures
- Multiple Sclerosis
- Tumors
- Head Trauma
- CSF pressure abnormalities -CSF leak, NPH

Carotid disease does NOT cause dizziness

 Carotids supply anterior brain. No dizziness circuitry there. Carotid disease causes weakness/numbness/speech disturbance

 Carotid endarterectomy rarely helps dizziness

Posterior Fossa stroke

- 50 year old doctor developed vertigo and unsteadiness
- Continued to operate for a week before seeking medical attention but wife wouldn't let him drive.
- PICA stroke seen on MRI

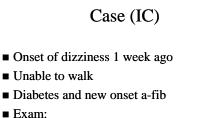

PICA (lateral medullary and cerebellum) – palatal weakness AICA (pons and cerebellum) – hearing loss SCA (cerebellar)

Posterior Inferior Cerebellar Artery (PICA) Wallenberg's Syndrome Lateral Medullary Syndrome

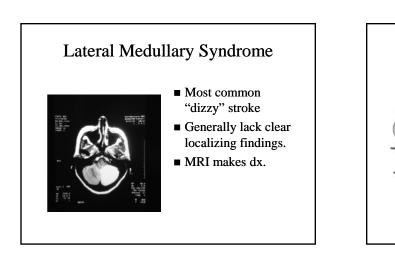

Adolf Wallenberg

German internist, born November 10, 1862, Preuss.-Stargard. died 1949.

- Ataxic but intact VOR
- No spontaneous nystagmus
- Neuropathy

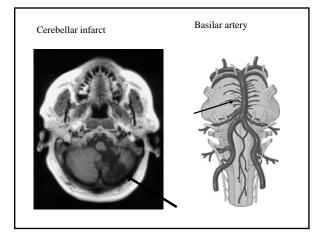

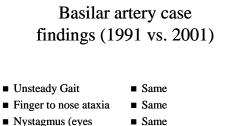

Lateral Medullary Syndrome

 Usually occluded vertebral

Basilar Artery syndrome (C.A.)

A 44 year old woman was involved in a rear end collision. She had a whiplash injury, and apparently the vertebral arteries in the neck were contused. Several days after the accident she became comatose, and studies suggested complete occlusion of the basilar artery.

 Nystagmus (eyes moving involuntarily)

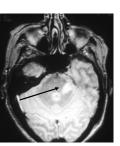

Basilar artery strokes are often fatal.

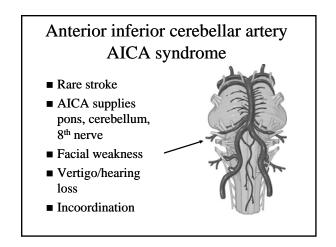

Common features of cerebellar gait ataxia

- Severe impairment of balance (worse than sensory balance disorders)
- Wide based gait
- Often refractory to treatment and time

- hypertension suddenly becomes dizzy, and develops facial weakness in swimming pool.
- Brought into hospital and CT scan shows stroke in pons.

Superior Cerebellar Artery SCA Syndrome

- Rare stroke
- SCA supplies superior cerebellum and midbrain
- Ataxia and diplopia

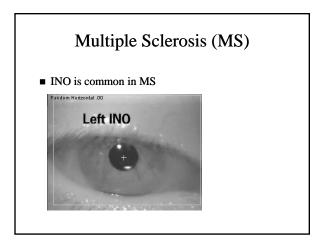

Paraneoplastic syndromes -- case

- 35 year old woman admitted to hospital because very unsteady – poor coordination
- Many tests were done without a diagnosis. Nobody did a breast exam.
- 1 year later noticed a large breast lump
- Breast cancer removed but patient left with severe cerebellar syndrome

Paraneoplastic syndromes

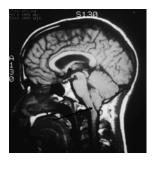

- Remote effect of cancer
- Associated with lung and breast cancer
- Vestibulo-cerebellar syndrome – dominated by
 Ataxia
- by
 - Nystagmus (particularly downbeating)
- May be related to cellular immunity

Multiple Sclerosis (MS) No single pattern Multiple lesions distributed in time and space

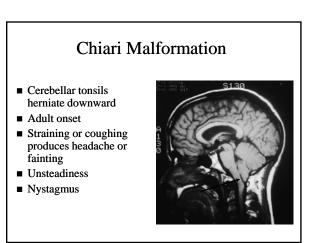

Chiari Malformation: Case

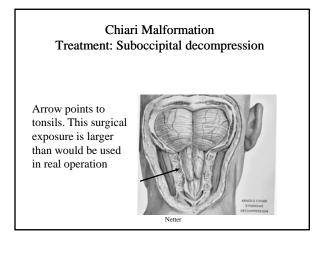

- Dock worker in Baltimore came in because gets dizzy when lifts heavy boxes
- Examination: unsteady, downbeating nystagmus.
- MRI showed cerebellar tonsils lower than normal.

Downbeating Nystagmus may be clue to underlying cerebellar degeneration or Chiari

Non-otologic ataxias – all of neurology ?

- CerebellarBasal Ganglia
- Hydrocephalus
- Sensory loss (B12)
- Periventricular WM
- lesions
- CSF leak
- Drugs (e.g. anticonvulsants)
- Degenerations (e.g. PSP, Palatal myoclonus)

Brain Tumors Causing Dizziness

We worry a lot about these rare disorders

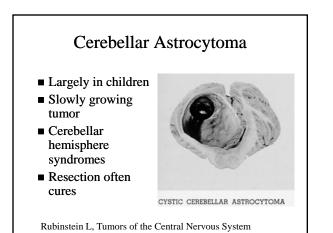

- Acoustic Neuroma (rare)
- Meningioma
- Cerebellar astrocytomaCerebellar

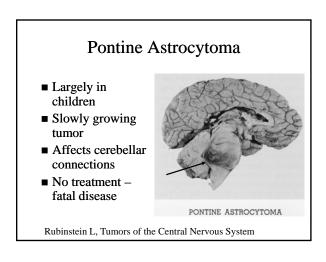

hemangioblastoma

Cerebellar Astrocytoma Case

- Young woman in residency training
- Developed a headache and went to ER. In ER a CT scan was done.
- A large tumor was found occupying most of right side of cerebellum.
- Tumor was removed after operation patient developed incoordination R side. Over 6 months, has improved so much can return to training program.

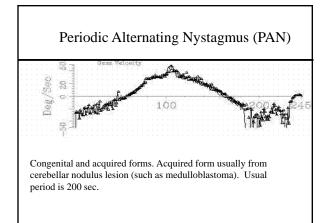

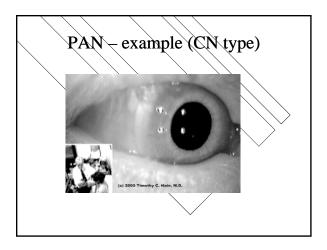

This child is holding onto the bed rail due to ataxia from a medulloblastoma

Severe ataxia Strong positional nystagmus

Cerebellar Medulloblastoma Mainly affects children Begins in cerebellar nodulus -vestibulocerebellum Hydrocephalus (projectile vomiting) and cerebellar signs. Treat with resection, chemotherapy and radiation. 5 year survival – 80%

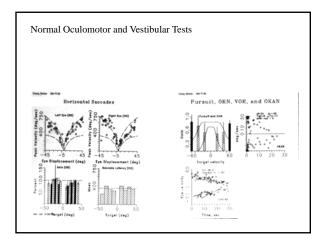

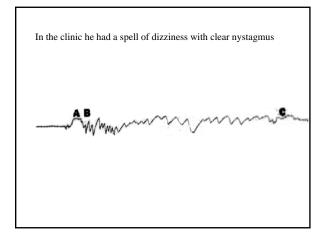

Treatment of Central Dizziness

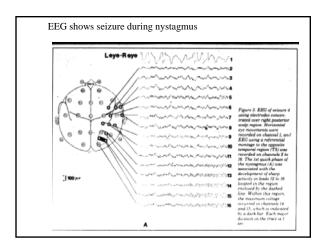

- Vestibular Suppressants
- ? Agents that promote compensation
 Betahistine, Amantadine, Baclofen
- Vestibular rehabilitation
- Environmental adaptations

Case

- 8 Year old became dizzy playing video games
- Mother noted the eyes jumped
- Transient confusion

Seizures causing Dizziness

- Quick spins (1-2 seconds)
 Also caused by vestibular nerve irritation
- Confusion and dizziness
- May be triggered by flashing lights
- Head injury is common
- Oxcarbamazine may stop them

Migraine & Vertigo: Prevalence

■ Migraine:

- 10% of U.S. population has Migraine†
- 20-30% of women childbearing age
- Vertigo: 35% of migraine population.*
- Migraine + vertigo (MAV):
 - ~ 3.5% of U.S. pop.
 - $\sim 10\%$ of women of childbearing age

† Lipton and Stewart 1993; Stewart et al, 1994*Kayan/Hood, 1984; Selby/Lance, 1960; Kuritzky, et al, 1981

Diagnosis of MAV Nystagmus

- No definitive pattern
- Often low amplitude downbeating or upbeating nystagmus
- ? Due to cerebellar disturbance

Diagnosis of MAV Clinical judgment

- Headaches and dizziness
- Lack of alternative explanation (normal otological exam, neurological exam, CT)
- High index of suspicion in women of childbearing age. Perimenstrual pattern.
- Family history in 50%
- Response to prophylactic medication or a triptan

CSF pressure problems Orthostatic symptoms

- CSF leak
 - Post-LP dizziness/nausea/headache
 - Post-epidural dizziness/hearing loss/tinnitus
 Idiopathic
- No nystagmus

CSF-pressure problems Normal pressure hydrocephalus

- Ataxic/Apraxic gait
- No vertigo, hearing problems or cerebellar signs
- Respond to spinal tap followed by shunt

Diagnostic Categories

- Neurological (i.e. posterior fossa)
- Medical
- Psychological (anxiety, malingering)
- Undiagnosed

"Medical Dizziness" 30% of ER dizzy cases

- Cardiovascular (23-43%)
 Orthostatic hypotension
 - Arrhythmia
- Infection (4-40%)
- Medication (7-12%)
- Hypoglycemia (4-5%)

Source: Madlon Kay (85), Herr et al (89)

Psychogenic Vertigo Substantial – perhaps 20%

- Anxiety, hyperventilation, panic, Agoraphobia
- Somatization
- Malingering

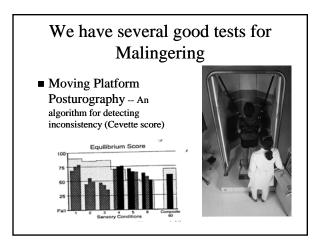

Anxiety

- Long-duration dizziness
- Situational
- Responds to benzodiazepines
- Some have vestibular disorders too

Somatization

- Chronic dizziness
- Numerous bodily ailments
- One goes away to be replaced by another
- We don't have a treatment for SD.
- Do not tell these people there is "nothing wrong". Rather, try to minimize the health-care cost.

Undiagnosed Dizziness

- About 15% of all dizzy patients
- Our tests are not 100% sensitive
- We are not perfect either

Summary - non otologic dizziness

- Neurological (i.e. Migraine, posterior fossa)
- Medical (i.e. low blood pressure)
- Psychological (anxiety, malingering)
- Undiagnosed
